### Report Description

Motion sensor is a device that senses motion of any non-living or living objects within its range. Motion sensors are a vital component in smart floodlights, energy efficiency, automated lighting control, home control and security systems among others. These devices save energy, time and are easy to install. Motion sensor is not only used in infotainment and business applications but also in routine activities in homes and other settings

Increasing application of motion sensors in smartphones is primarily driving the growth of global motion sensor market. Additionally growing demand for these sensors in the gaming and entertainment industry is propelling the growth of this market. People are playing motion-controlled game systems, which use sensors to detect activities. Increasing application of motion sensors in automotive industry has led to the increase in competitiveness in the market. Motion sensors are used in several automobile applications which range from Advanced Driver Assistance System (ADAS), airbag deployment system and security among others. At present, many luxury vehicles are coming up with large number of motion sensor products. In addition to this, rapid expansion of the automotive industry in the APAC region is set to bolster the global motion sensor market.

Motion sensor is largely being used in tablets and smartphones, and also in the healthcare industry.
